

6a.

This machine learning model encoded, contains or potentially exacerbates bias against people. For example black student loan borrowers are defaulting at nearly twice the rate of whites according to research by the Federal Reserve Bank. So such bias could cause false positive predictions based on location, gender and ethnicity.

66.

As this algorithm could be used for de-anonymizing variety of text including code. This could have a detrimental effect on people's livelihood or economic security. Misuse of this technology could have a detrimental effect on people's privacy at work.

For example some part of the text or code could be borrowed. Algorithm defines that it belongs to other authors, so that may cause copyright problems for company and particular worker.

CC.

In this case using principle of general ethical conduct like consent to use or share data. The data collected were public and all rights of the celebrities weren't violate.

c.d

This model uses data that were consented. And use this photos only within the certain app so there's no ethical concern in this issue.
